Bamboo Care

Bamboo is a material that needs to be taken care of in order to maintain a rich and beautiful surface for many years.

The natural material has a very hard surface, but it also becomes porous if left to dry out. We therefore recommend the bamboo to be treated with oil suitable for wooden outdoor furniture.

Follow the instructions on the oil-product when applying. Oil 2 to 3 times a year for optimal result.

The Bamboo slats are treated with fungicide and oil from the factory, which helps prevent deterioration of the material.

The bamboo will eventually fade with sunlight and the weather, but maintenance, oil and cleaning will help keep the bamboo lasting for many years. As any natural material standing outside, there is a risk of infection from fungi and spores from the environment. It will occur on the bamboo, as black or brown spots, and should be removed as soon as possible.

Removing fungi and repairing a damaged surface:

- Make the bamboo surface wet, and scrub with a stiff brush.

This cleans deep into the bamboo and removes grime and fungi. A small amount of soap can be used.

- When the bamboo is dry, use a power sander to sand the bamboo, just like a solid wood treatment. Start with a medium-coarse sandpaper, and when the desired removal is achieved, step up to a fine sandpaper to finish the surface. Make sure to sand the bamboo evenly everywhere.

- After cleaning and sanding, it is important that the surface of the bamboo is sealed immediately with oil. Apply according to the instructions on the product label, making sure not to apply more than necessary.

- Let the oil dry and enjoy your bamboo product.

Durability

- UV and weather resistant
- Water (salt and chlorine) and moisture resistance
- Non toxic and environmental friendly
- Strong and durable
- 100 % recyclable
- Washable (30°C)
- Maintenance free
